OFFICE OF
THE PUBLIC PRINTER
WASHINGTON

DECEMBER 5, 1910.

SIR: I have the honor to transmit herewith the annual report of the operations of the Government Printing Office for the fiscal year ended June 30, 1910.

Very respectfully,

SAM'L B. DONNELLY,
Public Printer.

The PRESIDENT OF THE SENATE.

ANNUAL REPORT OF THE PUBLIC PRINTER.

OFFICE OF THE PUBLIC PRINTER,
Washington, December 5, 1910.

To the Senate and House of Representatives:

The report of the transactions of the Government Printing Office for the fiscal year ended June 30, 1910, contains all of the statistical information required by law and an additional statement of the printing and binding executed for Congress, executive and judicial departments, and the independent government establishments, and the total charges for the principal items thereof during the fiscal year ended June 30, 1910.

The total appropriations for salaries, maintenance, and operation of the Government Printing Office were \$5,969,688.

The total appropriations, including those for the office of the superintendent of documents, leaves of absence, holidays, and salaries of the legislative employees, as well as those amounts credited by deposits or transfers at the Treasury Department for work performed, amounted to \$6,547,435.86. The total disbursements and outstanding obligations amounted to \$6,316,130.39, leaving a balance of appropriations unexpended of \$231,305.47.

Not considered in the foregoing paragraph is \$224,693.24 of earnings not available for expenditure, being the total of unsettled accounts on June 30, 1910, for work done during the fiscal year for the departments for which the office will be reimbursed from funds under control of the departments. The addition of this amount to the balance of \$231,305.47, noted above, will show an unused balance of \$455,998.71 to the credit of the several appropriations for the year 1910.

The ledger balance of \$231,305.47 on June 30, 1910, was composed of the following items: Legislative salaries, office of the Public Printer, for 1910, \$19,030.33; general expense, office of superintendent of documents, \$41,213.53; leaves of absence, \$16,576.72; pay for holidays, \$30,199.53; public printing and binding, \$124,285.36.

The total balance unexpended in departmental allotments for public printing and binding was \$382,997.35, which leaves a deficit in the congressional allotment of \$241,851.14.

The office received from the sale of documents under the act of March 28, 1904, extra documents, printing speeches, waste gold leaf,

waste paper, stereotype dross, leather scraps, condemned machinery, old material, old horses, and refuse wood the sum of \$177,000.43, and deposited same in the Treasury of the United States to the credit of miscellaneous receipts.

The total charges for work performed was \$6,324,395.41, and as the scale of charges for the present fiscal year was 5 per cent less than for the preceding fiscal year, the value of the work performed exceeded that of the preceding fiscal year by \$414,815.20. The work was performed with an average of 97 employees less than for the preceding fiscal year. The charges for the fiscal year exceeded the cost of maintenance and operation and an increasing efficiency was apparent, therefore an average reduction of 3 per cent in the scale of charges for the fiscal year 1911 was made, the principal decrease being 5 cents per 1,000 ems in the item of plain composition.

The unexpended balance of \$30,445.08 of the appropriation for legislative salaries, office of the Public Printer, on June 30, 1910, is in part offset by outstanding pay rolls in the office, due and unpaid on that date, of \$11,414.75, leaving an unused balance of \$19,030.33.

The unexpended balance of \$50,254.25 of the appropriation for leaves of absence on the 30th of June, 1910, is in part offset by outstanding pay rolls in the office, due and unpaid on that date, of \$33,677.53, leaving an unused balance of \$16,576.72.

Of the appropriation of \$200,000 for the payment of holidays there was disbursed \$169,800.47, leaving an unused balance of \$30,199.53.

Of the appropriation of \$220,000 for general expenses, office of the superintendent of documents, settled for by transfer from said appropriation to the appropriation for printing and binding, 1910, there remains an unused balance of \$41,213.53.

The several tables of the annual report are taken from the records of the office and are evidence that the accounting system is founded on sound principles and gives all the data required for the proper conduct of a government establishment. The accounts of the office now show the cost of operating each division and section, making it possible for the Public Printer to ascertain the cost of the various operations and determine the comparative efficiency of the supervisory force. Under the present plan the condition of the appropriation and of the finances of the Office are made known daily, a statement being prepared each day which shows the amount of the obligations assumed and the balance available for operating the plant. A monthly statement of the condition of its allotment is furnished to each department and independent office. This effectually prevents the occurrence of a deficit, and whenever an unusual expenditure of money becomes necessary it is possible not only to provide for it in advance but to make a clear statement to Congress of the reason for the transaction.

OVERHEAD CHARGES.

In view of the prevalent opinion that the overhead charges of the Government Printing Office are not as great as that of commercial or privately conducted establishments, I deem it proper to state that while Congress in 1909 eliminated the expenses of the office of the superintendent of documents as an overhead charge against public printing and binding, there remains as overhead charges the items of power, heat, and light, repairs to buildings and plant, maintenance of stables and delivery section, stock rooms, sanitary forces, and payments to employees injured in the service; for watchmen, \$49,080; for holidays, \$169,800.47; for leaves of absence, \$358,423.38; for legislative salaries, which include the office of the Public Printer, the office of the Deputy Public Printer, and the purchasing and accounting sections, \$190,003.18.

Our overhead includes all of the items entering into the expenses of operating a commercial shop, with the exception of rent and insurance. The items of rent and insurance are more than offset by the items of leave and holidays, amounting to \$528,223.85. As a matter of fact, the expenditure for leave and holidays is sufficient to pay the rent and insurance upon twice the floor space of that occupied by the Government Printing Office in the cities of either New York or Chicago.

The manufacturing divisions of the office, in addition to their own overhead, are required to carry a general overhead charge of 20 per cent.

The sum necessary to pay for leave of absence and holidays should be allowed in one appropriation, and these two items should not be considered in fixing the scale of charges for work performed. The practice of dividing and subdividing appropriations has the effect of increasing the volume of bookkeeping and the work of recording the time of employees and the computation of the pay rolls.

THE WORK OF THE YEAR.

An unusual quantity of rush work was performed during the fiscal year, the largest job consisting of the printing of the blanks used in taking the thirteenth decennial census. During the winter months we were compelled to run a number of our rotary presses continuously on three eight-hour shifts. In no case, however, has the work of the departments been delayed as a result of the failure of the Government Printing Office to deliver printed matter. In February we undertook the work of printing the United States postal cards. On this work many difficulties were met with, particularly owing to paper and mechanical troubles. At the date of the submission of this report, however, the work is up to date. The Government Printing Office printed in the month of October 156,834,000 cards.

The organization of the Government Printing Office has been perfected in detail, the cost-accounting system improved, and particular attention has been given to the practice of economy in the use and purchase of material and supplies. The method of keeping property records and stores accounts has been improved and an orderly and effective rearrangement and organization of the stores division consummated. The Joint Committee on Printing authorized me to change the style of the Congressional Record Index, with the result that a saving of about \$30,000 was effected. The Book of Estimates for the next fiscal year will be reduced in size. Extravagant uses of paper no longer occur.

The reorganization of the office of the superintendent of documents referred to in my preceding report has been consummated. The work of binding the reserve for the office of the superintendent of documents was completed during the fiscal year and brought up to date. The revenues of that division showed an increase over the preceding fiscal year of \$9,424.88, and there remained in the Treasury at the end of the fiscal year an unused balance of \$41,213.53, and \$2,873.51 of the salary appropriation was unexpended.

The construction of the passageways recommended in my last annual report has been undertaken. As a result of careful attention to utility and economy in design, we propose to install three bridges connecting the wings of the second, third, and fourth floors at a total expenditure of \$2,000. I have not undertaken the construction of the lunch room and the alteration of the eighth or attic floor of the building for the reason that a careful examination of the structure revealed the fact that the builders had installed a dead floor load of 86 pounds per square foot, while the safe carrying capacity of the floor beams is but 110 pounds per square foot, leaving only 24 pounds per square foot for a live load, which is entirely inadequate for any purpose whatever.

Toward the end of the past fiscal year a series of experiments were conducted in our power plant to determine the feasibility of burning a cheaper grade of coal. These experiments were very successful, and in the present fiscal year we are burning pea coal at a cost of \$4.12 per ton, as against the egg coal burned last year at a cost of \$5.79 per ton. Based on the amount of coal burned during the first four months of the present fiscal year the annual saving in the coal bill will amount to not less than \$10,000, all of which was made possible by the expenditure of only \$800.

The work of standardizing the loose-leaf binders in use in the government departments has been commenced and will be continued during the coming fiscal year. Samples of all job work and blanks printed during the fiscal year will be arranged and classified, with the object of determining the exact grade of paper necessary on all the

classes of this work and endeavoring to provide for the running of many forms in combination and on rotary presses.

In June I addressed the following letter to all of the departments and establishments of the Government:

JUNE 11, 1910.

SIR: I have the honor to call your attention to certain matters relative to the work of public printing and binding, and to request that they be given consideration by your department.

I am sending you under separate cover a copy of the list of paper for the public printing and binding furnished the Government Printing Office on the annual paper contracts for the year ending February 28, 1911, and have the honor to respectfully recommend that such instructions be issued in your department as you may deem necessary to insure a strict compliance with the provisions of the printing law, which requires that all paper for the public printing and binding shall be purchased for the use of the several departments through the Government Printing Office upon annual contract, so as to discourage the practice of the departments of furnishing paper for use in the public printing and binding, it not being regarded as consistent with the law to honor requisitions for printing and binding upon paper or material furnished in any manner other than as provided by law.

It is my intention to revise the paper list and, if possible, reduce the number of items carried thereon. However, should you find that the list does not contain all papers of a quality, size, or weight that you deem necessary for use in the work of your department please advise me.

Beginning with the month of October, 1910, the Government Printing Office will be required to perform an unusual amount of work for the Census Bureau, and after the convening of Congress in December the demands upon the Office will be exceptional. In anticipation of this condition you are requested to furnish us with the copy for the annual reports and publications of your department for the fiscal year ending June 30, 1910, at the earliest possible date. We particularly desire you to hasten the transmission of all copy for tabular matter. You can greatly assist us in expediting the publication of these reports by forwarding copy during August.

During the present fiscal year the maximum demands made by the departments upon the Government Printing Office for miscellaneous and job printing were made in the months of February and March, at the time when the congressional work was heaviest, with the result that we were compelled to run overtime in our press room. Is it not possible for your department to order in the month of July (the first month of the fiscal year) at least a nine months' supply of permanent blanks, forms, and other job work? A monthly tabulation of the requisitions received for this class of work during the present fiscal year leads me to conclude that in a number of cases departments anticipate the consumption of printing by the calendar year instead of the fiscal year, with the result that the maximum demand for job printing and miscellaneous work is made upon the Government Printing Office during the first months of the calendar year and at a time when the demands of Congress are heaviest.

The Government Printing Office is now manufacturing loose-leaf binders and binding devices of the standard sizes described in the schedule of the general supply committee. All of these devices can be most economically produced if the Public Printer is advised at the beginning of the fiscal year as to the probable quantity of each design that will be required for the use of your department, and I would suggest that it would be in the interest of economy if your department would place its orders for binding devices with this office.

Respectfully submitted.

SAM'L B. DONNELLY,
Public Printer.

The replies received tend to show that we are carrying an ample variety of paper stock, and I am pleased to report that my suggestion that the greater volume of job work be performed in the summer and autumn months has received almost universal approval and support.

The style book of the Government Printing Office has been revised, with the object of eliminating exceptions and special requirements in departmental work which frequently cause confusion and loss of time. A copy of the revised style book and the decisions of the United States Geographic Board are transmitted herewith as a part of this report.

I have endeavored to cooperate with the Printing Investigation Commission in their efforts to reduce the volume and cost of public printing and binding, and also to carry out the President's policy of economy and efficiency.

During the fiscal year machinery was purchased as follows:

RECOMMENDATIONS.

I renew the recommendation made in my last report to the effect that the site west of the H street annex building be improved by the construction of a seven-story fireproof factory building for use during the period which will soon arrive when for purposes of economy. Congress will undoubtedly provide for the demolition of the old structure and the erection of a building ample for the uses of the Government as a miscellaneous supplies stores and mailing department. On a site opposite and south of the Government Printing Office building the new post-office structure is now under construction and steps should be taken to provide for the installa-

tion, in the Government Printing Office, convenient to the new post-office, of shipping facilities for the distribution direct from the Government Printing Office of all government publications. We now operate a mailing department for the issuance of the Congressional Record and the transmission of documents to public libraries, and on two occasions during the past year we have given the use of sections of the old building to other government establishments for the purpose of wrapping and mailing publications. At the present time the product of the Government Printing Office is hauled to the different departments and bureaus, where it is wrapped and addressed and then again hauled to the post-office and from the post-office to the railway shipping point. The Government Printing Office shipped direct from the work-room, by registered mail, during the past year 399,556 post-office money-order books.

SUBSTITUTION OF AUTOMOBILES FOR HORSES AND WAGONS.

The cost of maintaining the stables of the Government Printing Office during the fiscal year ended June 30, 1910, including the items of supplies, feed, rent, repairs, shoeing, light, and wages of foreman and stablemen, amounted to \$18,447.37. The average number of horses kept during the year was 23. Eliminating from the above sum the cost of rent, repairs to harness and wagons, and light, the cost per horse for the year was \$658.78. Counting three hundred and thirteen working days for the year, the per diem cost for each horse was \$2.10½. The officials of the Washington Navy-Yard, Bureau of Standards, Potomac Electric Power Company, Adams Express Company, the Terminal Taxicab Company, and the firms of Woodward & Lothrop, Chapin-Sacks Manufacturing Company, and Dulin & Martin, all of whom have substituted automobiles for horses and wagons, have courteously permitted the representatives of the Public Printer to examine their costs of operation and maintenance, from which examination, we concluded as follows:

The present Government Printing Office truck equipment consists of seven 1-horse wagons and six 2-horse wagons, requiring 7 and 14 horses, respectively; to replace this equipment would require three 1-ton trucks and three trucks of from 3 to 5 tons capacity. The estimated cost of maintaining this equipment is as follows:

6 operators, at \$2.40 per day	(one-sixth time)	\$751. 20
6 messengers, at \$2.40 per day	(one-sixth time)	751. 20
Labor in garage, at \$6 per day		1, 878. 00
Material for charging and renewing batteries		850. 00
Cost of repairs, including new tires		3, 000. 00
Current		360. 00
Total		7, 590. 40

The depreciation on these machines is about 10 per cent, and will amount to about \$2,500 per annum, which is not included in the above figures. The total cost of the stables, including miscellaneous supplies, feed, repairs to harness, wagons, etc., shoeing, gas, electricity, and wages of foreman and stablemen, but not including rent or the wages paid drivers and messengers, is \$16,047.37.

If automobiles replace the wagons, it would so reduce the stable equipment that the total transportation expense would not exceed \$11,000 per annum, as against \$16,000 for all-horse service, exclusive of the wages of drivers, which amounts to \$6,009.60 per annum. This will bring the total cost for all-horse service to about \$22,000, and as the cost for automobiles and carriage service, including mail wagon, combined is estimated at \$11,000, there would be a saving of approximately \$11,000.

The printing of the Sunday eulogy editions of the Record during the last session of Congress required an extra expenditure of \$7,803.27. It is recommended that in the future the Sunday eulogy edition be printed on Monday and delivered on Tuesday morning with the regular Monday issue. If this plan is adopted, the volume of Sunday work will be greatly reduced and a considerable saving will result therefrom.

The cost of the installation (\$40,000) and maintenance of storage batteries has caused me to defer their installation. I recommend that instead of installing the storage batteries, for the purpose of protection against breakdown, particularly during the sessions of Congress, that authority be granted to connect the Government Printing Office with the Capitol power plant. The installation of the equipment, conduit, and necessary wiring from the Government Printing Office to a suitable point in the basement of the Senate Office Building will cost \$14,000. By making this connection power can be secured from the excellent and adequate Capitol plant in case of breakdown in the Government Printing Office.

During the first and second sessions of the Sixty-first Congress there was printed a total of 46,023 bills, resolutions, reports, and miscellaneous orders. Of this number only 687 were enrolled. The bills are set in 14-point Roman type and are made up with a 12-point slug (about one-sixth of an inch) between the lines. The paper used in this work cost \$28,626.75. By spacing the lines in bill and resolution work with a 6-point slug instead of 12-point, the quantity of paper consumed can be reduced about one-fourth, except in bills making one page, and the labor saving in presswork will be material. The size of type page now used allows sufficient blank space upon margins to permit of the marking of amendments, riders, notations, and references.

While the Public Printer has authority to arrange the work in such manner and use such material as will be in the interest of

economy, the regulation of the volume of public documents issued is a power that rests entirely with Congress. In this respect I desire to make one recommendation, as follows:

That, for the purpose of determining the number of each public document to be printed, publications be divided into documents of three classes.

Class A to consist of documents printed solely for the use of Congress in the transaction of its business and of which a number sufficient to supply a copy to each member of the House and Senate, copies for the permanent records of the Government, and copies for the press shall be printed, a total of about 500, and no more, the type to be remelted immediately after printing.

Class B to consist of those documents that are of necessity printed solely for the use of Congress and necessary for the transaction of its business, of which the maximum number to be printed shall be 1,000 copies, the type to be held sixty days in case a reprint should be deemed necessary.

Class C to consist of those reports and documents containing matter of such interest to the general public as to render their distribution to public libraries justifiable, and also those containing matter of historical and scientific value. Of this class of matter electrotypes or stereotype plates shall be made, and only those documents included in Class C shall be distributed to depository libraries and supplied to Members of Congress for distribution.

Bearing on this matter, I call your attention to the fact that during the second session of the Sixty-first Congress, December 6, 1909, to June 30, 1910, there were printed at the Government Printing Office 664 Senate documents, consisting of 30,811 pages; 917 Senate reports, a total of 7,915 pages; 1,049 House documents, a total of 62,923 pages; 1,737 House reports, a total of 8,237 pages, an aggregate of 109,886 pages.

Of these documents and reports a great number was necessary solely for the proper transaction of the public business, and consisted of communications, petitions, and memorials.

The following examples might be cited:

Letter from the Public Printer reporting on traveling expenses paid during the fiscal year to employees of the Government Printing Office.

Property in possession of the Sergeants-at-Arms.

Statements of departments showing documents received and distributed during the fiscal year.

Letters transmitting copies of correspondence relating to claims against the United States.

Statement of expenditures from contingent funds of departments, consisting of statements of traveling expenses, etc.

It would seem that the supplying of each member and officer of committees of both Houses with copies and the furnishing of a required number of copies for the press would be sufficient to give the desired publicity to all documents relating to the routine business of the Government and the everyday transactions of the Houses of Congress.

I am of the opinion that the division of documents into three classes can be made by designation when they are introduced, and in the case of documents that appear incidental to the transaction of the business of the House and Senate the classification can be made by the Public Printer. The number and distribution of the documents of Class C should be determined annually by the Joint Committee on Printing, and the Public Printer should conform to a schedule to be prepared by the Joint Committee. The adoption of this plan will greatly facilitate the operation of the valuation scheme of Congressional distribution, which has been suggested by the Joint Printing Investigation Commission as a substitute for the present plan.

Respectfully submitted.

SAM'L B. DONNELLY,
Public Printer.

REPORT OF THE MEDICAL AND SANITARY OFFICER.

WASHINGTON, *October 31, 1910.*

SIR: Attached hereto please find tabulated statement showing, by name and in a descriptive manner, the number of surgical and medical cases receiving treatment in the Government Printing Office emergency room, together with a list of the employees receiving benefits under the government compensation act during the fiscal year 1909-10.

It will be noted that a total of 1,758 surgical and medical cases were treated and given physical relief. The number of redressings of wounds received by employees while at work, but who were assigned to other or lighter duties pending recovery, and who have therefore made no claim for compensation, amounted to 927. Distinctive redressings during the fiscal year are shown by the individual medical records on file. The amount paid for compensation where an employee was forced to leave his duties during the same period amounted to \$2,936.97.

It may be pertinent to the subject in hand to say a word or two about the prevention of accidents, so far as swiftly moving or power-driven machinery is concerned. It would appear both feasible and practical, upon reflection, to incorporate in any contract for the purchase of machinery for this office a clause setting forth that the manufacturer or agent of the machine shall place an indemnity bond with a surety company to the amount of, say, 5 or 10 per cent of the total cost of the machine, which in turn is to run during the estimated life or period of usefulness of the mechanism, as shall be agreed upon, such bond to be drawn upon by the Government after an accident, for the purchase of safety devices, bulwarks, mechanical guards, etc., to be placed upon the specific machine so covered.

This method should insure to the Government:

- (1) The avoidance and responsibility of maiming employees for life.
- (2) The saving of large sums of treasure—if other branches of the Government and state governments should adopt such a measure—that is and would be otherwise wasted, so far as prevention and a repetition of the accident are concerned.
- (3) Safety measures that are automatic in their functions and operations obtained at a minimum of cost.
- (4) Relief of courts of law from the burden of time and expense in passing upon the party at fault—the Government as employer, or the employee through negligence.
- (5) Universality and automatous in action or scope, whether the machine is placed in Alaska, Washington, or Panama.

To the employee it would insure against:

- (1) The avoidance of physical pain and misery.
- (2) Reduced earning capacity.
- (3) Death, or invalidism for life.
- (4) The receipt of possible injuries to limbs that mere money could not hope to offer adequate compensation.

To the manufacturer it would insure:

- (1) Relief from mental anguish, responsibility, and worry after an accident.
- (2) Avoidance of expense; hence reduced profits upon his output as the sequel to an injury.
- (3) The minimum expense involved at the time of the construction of machinery in covering all dangerous points.
- (4) Ingenuity of the mechanic or draftsman brought into play at the erection or construction of the machine, in order that the manufacturer may receive low rates upon his bond or insurance for a well-protected machine, as is the case of a house well protected from fire, resulting in a low rate of insurance.

This opportunity is taken to thank the Public Printer and the Deputy Public Printer for their support, initiative, and firmness in the maintaining and enforcing of sanitary rules and regulations; also to thank the Assistant Medical and Sanitary Officer, the various division and section chiefs, as well as a very large number of the employees for their active cooperation along the same lines, without whose help it would not be possible to have the sanitary conditions that exist to-day in the Government Printing Office.

Respectfully submitted.

WM. J. MANNING, M. D.,
Medical and Sanitary Officer.

SIXTEENTH ANNUAL REPORT OF THE SUPERINTENDENT OF DOCUMENTS FOR THE FISCAL YEAR ENDED JUNE 30, 1910.

GOVERNMENT PRINTING OFFICE,
OFFICE OF THE SUPERINTENDENT OF DOCUMENTS.

October 1, 1910.

SIR: In accordance with the provisions of section 61 of the general printing act, approved January 12, 1895, it becomes my duty to submit to you my annual report, being the Sixteenth Annual Report of the Superintendent of Documents. It covers the period from July 1, 1909, to June 30, 1910. The receipts and disbursements during this period, the receipts and shipments of public documents, as well as comparative data for previous years, I have the honor to present in the usual tabular form. While I did not enter upon the duties of my office until the 16th of July, 1909, the operations of this division for the entire year may be said to have been under my supervision, and I am therefore better prepared than a year ago to discuss the matters that pertain to the Division of Public Documents. It seems to have been the custom for the incumbent of this office to state in detail once a year what duties are assigned him by law, and I will therefore here enumerate them. These duties are:

1. To sell at cost any public document in his charge the distribution of which is not specifically directed in the law.

2. To receive from any government office any document published for sale, which sale must be made under the provisions of section 61.

3. To have general supervision of the distribution of all public documents (with exceptions enumerated).

4. To prepare at the close of each regular session of Congress a comprehensive index (document catalogue) of public documents.

5. To prepare and print in one volume a consolidated index (document index) of congressional documents.

6. To index such single volumes of documents as the Joint Committee on Printing shall direct.

7. To receive all accumulations of documents from the several executive departments, bureaus, and offices of the Government, and annually to take over their surplus for distribution or sale.

8. To prepare and publish a monthly catalogue of government publications, which shall show the documents printed during a month, where obtainable, and the price thereof.

9. To thoroughly investigate the condition of the designated depositories.

10. To distribute the documents as issued to the designated depositories.

The foregoing would seem a sufficient assortment of duties to give full employment to the force assigned to this division, but in addition thereto many thousands of letters are written each month in reply to inquiries pertaining to public documents, their nature,

prices, etc. We also receive the surplus accumulations of libraries and supply them in exchange with documents they have use for.

In addition to the foregoing, the superintendent has made it his duty, and it is a pleasure as well, to accommodate Senators and Members whenever possible with exchange of publications that their constituents desire for such documents as this office can dispose of. Many kind words of appreciation have rewarded this cooperation, and the same course will be pursued in the future to the fullest possible limit.

Recurring to the duties of the Superintendent of Documents, as enumerated above, I take occasion to speak more at length with regard to several of them. The "general supervision" of the distribution of public documents referred to in paragraph 3 is far less general than was evidently intended. As has been frequently stated in the reports of my predecessors, many departments and bureaus have mailing lists, and hence the large duplication of documents results that employs the railroads to transport, the office of the Superintendent of Documents to handle, and the purchaser of waste paper to restore to the condition of paper pulp. A concentration of mailing lists in this office, the composition of which could still be controlled by the different departments and bureaus, seems to be the most feasible way to detect and prevent this wasteful practice.

While many libraries seem to appreciate the privilege accorded them in supplying public documents, others do not apparently care for what is supplied. A recent effort at investigation in this direction was made by the Printing Investigation Commission, and the result fully corroborates what I have just stated. Take the case of the Official Gazette libraries to begin with. The Gazette is a most costly publication, costing considerably more than the modest \$5 per annum that is charged private subscribers. The full number of designations by Senators and Representatives under the law would be 3,904. When the commission sent out its circular 3,190 were on the list. Of this number, 1,543—less than half—desire to continue receiving the publication, while 903 do not want it. In addition, 744 care so little for it that they even failed to reply to the repeated inquiries of the commission. Not much greater appreciation is accorded the Geological Survey publications by the libraries that have been in receipt of them. Of the 1,008 on the list—the total number that could be designated is 1,948—only 505 want them, while 143 would like to select, which is not permissible under the present law. No less than 158 do not want them any longer, while 202 libraries failed to make any reply whatever. Of course shipments were discontinued, when the foregoing facts were thus laid bare, to all except the libraries that desired to continue as depositories.

No. 4 looks to the prompt issue at the close of each regular session of Congress of the comprehensive index (document catalogue) of public documents. I regret to say that promptness in carrying out this design has not apparently been conspicuous for a number of years. In the interest of best service as well as economy one of my predecessors, with the sanction of the then Public Printer and the evident approval of the Joint Committee on Printing of that period, prepared this catalogue at the close of Congress, instead of each session. His reasons were in my opinion sound, as I had the honor to state in writing to the chairman of the Joint Committee on Printing,

and the book has ever since been prepared in accordance with the amended plan. Upon my entry into this office I found that neither the document catalogue for the Fifty-ninth nor the Sixtieth Congresses had been issued, and my earnest aim has therefore been to hasten these long-delayed publications. It gives me pleasure to state that half of this work will have been accomplished several months before this report meets the eye in print, and the full force available for this class of work will then be busily engaged in hastening the issue of the comprehensive index of public documents pertaining to the Sixtieth Congress.

The requirement enumerated by No. 6 is one that may lead to some embarrassment in the future, and I better anticipate the subject now. The force assigned to this division is about adequate to the performance of the definite duties assigned to it. The preparation of the indexes mentioned in the paragraph referred to is absolutely an unknown quantity; the people trained to do this work are not numerous nor readily obtained in an emergency; neither would it be in the interest of economy to keep in readiness to respond to calls that may and may not come a force competent to do this work. Under these circumstances I may as well state frankly that if I am not called upon very frequently to do this work the force under my direction will cope with it as promptly as possible, but should there be much of it I shall be compelled to do one of two things—either let the current work of this division, which I found far in arrears, lag behind or respond to the call for this extra work only as promptly as I can find time and people who can do it.

Paragraph 9 looks to the examination of designated depositories, and this refers to a very large proposition. Many efforts have been made by this office in the past to comply with this requirement of law through the only means provided for such compliance. These means were solely the sending out of letters requesting information on all essential points, and the replies thus elicited, in many instances vague and indistinct, are all we have to go on. I am compelled to say that it is not as full as the law evidently contemplates. Nor has the recent effort of the Printing Investigation Commission in this direction been altogether satisfactory. A periodical personal inspection will alone furnish the information that the law implies the Superintendent of Documents should acquire, and in this opinion not a few of the leading librarians of the country coincide.

The whole subject of the public printing, including the operation of the Division of Public Documents, has received and is receiving the benefit of the activity of the Printing Investigation Commission, and in view of the recommendations that will undoubtedly result from this source, I deem it proper not to indulge in very extended remarks as to legislation that may, in my judgment, result in obtaining better results than have been possible under the laws that now govern the Division of Public Documents. At the same time you probably expect me to give expression to the views I entertain regarding some of the requirements that govern my official action. I will endeavor to speak briefly and to the point.

To begin with, the law creating depository libraries clearly contemplated establishing that many "halls of record" of the history of the United States, as recorded in its official publications. I do not believe this intent has been carried out in the spirit intended.

There is a very large proportion of such libraries that can not afford the room and the talent that the preservation and full use of such literature implies. Hence a considerable proportion of the documents shipped to these libraries is not handled as it is intended, which fact is apparent from the replies made to the circular letters addressed to them. Again, libraries have been dropped from time to time, and the documents furnished their successors never embrace the earlier output. At the same time, a designated depository library seems fairly to fulfill its mission if it gives access to the publications received while these are of interest to the general reader, and this office does not seem to have insisted rigidly at any time upon literal compliance with the requirements laid down.

Regarding the unnecessary and frequently undesired duplication of public documents there can be but one opinion, and a remedy against it has already been suggested. That the larger libraries, however, can frequently make proper use of more than one copy of a publication seems to be demonstrated, and I respectfully suggest that the Superintendent of Documents be given authority to grant requests for additional copies when he deems such requests proper and is able to supply the desired additional books.

In my former annual report I took occasion to emphasize the desirability of legislation that will permit libraries periodically to choose such publications as were of practical value to their institution, and my views in that regard have been very largely indorsed by librarians all over the country when writing to me in the course of business and in conversation. Even those desirous of obtaining everything printed conceded the benefit that would accrue to smaller libraries if liberty to select were accorded. The Superintendent of Documents could inform libraries say once a year what regular publications will be issued, and they could then make selection of those they desired to obtain. The requirement of law that depository libraries must properly classify and shelve all public documents is simply beyond the ability of a large proportion of them to do, and yet it is desirable that as general access as possible to these documents be afforded. The suggested modification of the law would make for economy in several ways. The editions would be made to conform more nearly to the number of libraries which could and would make proper use of what we forward. The expense for transportation would be lessened, for the shipping and reshipping of undesired publications adds many thousands of dollars to the expenses of the Post-Office Department. In addition, the labor now expended in this division in the assorting of the hundreds of thousands of documents returned each year would be materially reduced.

Practically, ever since this office was organized it has been an advocate of one edition for every book, and my predecessors have strongly objected to the various forms in which the different publications are issued. To correct this evil, in March, 1907, Congress passed an act taking all annuals and serials from the congressional document series, which act, had it been allowed to remain on the statute book, would have resulted in reducing the old sheep set about one-third. It would not have broken the serial arrangement, but would have meant that the sheep set would be made up entirely of publications emanating from Congress. The annuals and serials which, besides having a departmental edition, were printed with

document numbers, thus making them a part of the congressional set, under the new arrangement would have been sent to the libraries identical in every way with the departmental edition. Before this law became operative, however, the Senate and House libraries and document rooms decided that they must have the document numbers on all annuals and serials as before, and as a result of this complaint the law of March, 1907, was amended, against the wishes of this office, so as to have the document numbers taken off only the annuals and serials of the library edition. That a majority of the librarians of the country approve of the omission of the annual and serial publications having the departmental edition from the congressional set was shown some years ago when a proposed draft of a bill making certain changes in the printing laws was submitted to them for their opinion. A number of their replies may be found in the second annual report of the Superintendent of Documents. In view of the fact that not one-half of the publications issued by the Government are printed as congressional documents and reports, it has been necessary and always will be for the libraries of the country to shelve certain of them under a subject classification. Therefore I can not see why there should be serious objection to the filing of annuals and serials which are now received with plain title the same as the other publications which have always been received without document numbers.

In a paper which I wrote to be read before the public documents meeting at the American Library Association Convention this year, I made a strong plea for the one edition for one book, and I believe the librarians of the country will appreciate that such a change is the only one that will rescue the Government publications from entanglement.

To return to the old method of placing the serial numbers on the volumes before they are sent to the libraries, which is impossible under the present law, would mean that the libraries would again have to wait anywhere from a year to eighteen months before they would receive annual reports or serials after their publication; whereas the present method of distributing makes immediate delivery possible. Of course it is impossible to prepare the schedule of volumes and assign serial numbers until all of the documents and reports of a session have been printed. I have tried on a number of occasions to obtain advance information, such as the number of pages and volumes, about documents that have been delayed, but as this information could not be counted upon as being accurate I have been compelled to wait until the book has been printed. In view of the fact that there is nothing to prevent librarians from numbering these publications later on, when a number can be assigned, it certainly seems more desirable to send them the volumes promptly than to recur to the former season of delay that has been so unsatisfactory, and which subjected this office to considerable criticism that was altogether undeserved.

When I entered upon the charge of this office I found that all shipments went by registered mail. This entailed not only considerable work on the clerical force, but it imposed large expense on the Post-Office Department. The postal authorities, in the interest of economy, addressed to you a letter urging that the volume of registered mail be reduced as much as possible. Being called upon by you to comply

with this request, so far as I was able, I ordered the discontinuance of shipping books by registered mail, except in the few instances where the value of a shipment was considerable. This must have saved to the Post-Office Department many thousands of dollars, while the instances reported to me where books have not been received have been few and far between, and certainly bear no comparison, as to the value of duplicated shipments, to the cost to the Government by the former method.

There is yet a large amount of registered mail that leaves my office, being remittances to patrons of money sent for publications that can not be furnished. When the volume of our business is considered, it will not surprise you to learn that the number of registered letters containing these cash returns aggregates something like twelve thousand in a year. There is no way to avoid this with safety. I am responsible for every dollar that is paid into this office, and I would not care to return cash money except by registered letter. There is but one method by which this could be obviated and that perhaps may require legislation. I can see no good reason why the Superintendent of Documents, who is bonded in the sum of \$25,000, should not, like the Commissioner of Patents and possibly other officials, have a bank account, so that he might remit money by check, which would obviate the necessity of registering these many thousands of letters. Another benefit that would accrue to the Government from giving me this authority would be to materially lessen the labor that now devolves upon certain officials at the Treasury Department. While our receipts are periodically transmitted to that department, we do not receive credit until collection has been made on the tens of thousands of checks, drafts, etc. By banking these receipts I would remit to you by check, which would be a very simple transaction and save, as may readily be perceived, an infinite amount of labor.

With your permission I have carried into execution a plan by which small books of coupons are furnished purchasers of public documents. A very large proportion of our patrons are steady buyers of whatever we have for sale, and by using these coupons, which are sold at the rate of \$1 for a book containing 20 coupons, the purchaser of books is not compelled in every instance to either purchase a money order or run the risk of inclosing the amount in cash. The cost of all our documents is 5 cents or a multiple of that sum, so that these coupons answer every purpose in the way of obtaining what we have to sell. I find that not only is this innovation received with great satisfaction by those with whom we are doing business, but that to some extent it stimulates our sales. It certainly has proven a great convenience, both to the public and to this office.

At the beginning of my term of office the Division of Public Documents comprised 112 employees, the total appropriation for whose compensation was \$103,198 for the fiscal year 1910. The current year's appropriation totals \$100,584, while the number employed has been reduced to 103, the reduction, which was made possible by a rearrangement of forces, being effected by leaving vacancies unfilled. There was thus saved on the salary appropriation for the last year the sum of \$2,754.56. On the appropriation for expenses I expect to have saved in the neighborhood of \$35,000, the total not being definitely ascertained at this date. The expenses for the current fiscal year will be confined within an appropriation \$60,000 less than that

for the preceding year. It gratifies me to be able to add that while on the one hand the expenses of this division have been reduced, on the other hand the reduced force has handled a considerably increased volume of business. The cash sales of public documents, even in the absence of an appropriation for advertising, have been larger by \$8,313.36 for the year, or almost 12 per cent. This result is to me so satisfactory that I am tempted to state it again in a briefer form: This division last year transacted 12 per cent more business than the year before, with nine less employees, and at a saving of \$2,754.56 for salaries. The expenses were about 10 per cent less than the amount appropriated for them. The expenses during the current year will be more than 25 per cent less than the amount that was appropriated for the last twelve months. In a word, we are doing considerably more business at considerably less expense.

I feel justified in inviting your attention to the fidelity and devotion exhibited by the people employed in this division. On the day I assumed charge you expressed to me your emphatic desire that the accumulation of documents that had been returned from libraries and received from other sources be assorted and carefully examined, with a view to submitting to you, before the meeting of Congress, only four and one-half months distant, a report recommending in detail what might be regarded as obsolete and therefore condemned. The million and a quarter documents comprising this accumulation had been thrown together as it came in. It was classified not even by departments, and the job that confronted me seemed almost impossible to prove equal to with the force at my command. Some hard thinking was applied to the problem, and quickly a plan was evolved that gave hope of success. To begin with, the hours of labor were temporarily lengthened and the entire force interested itself in the accomplishment of what was so important to complete within so brief a period. Suffice it to say, that hard work, cheerfully and faithfully given, enabled me to meet your wishes, so that on the Saturday preceding the meeting of Congress I was able to hand you a typewritten report of more than 400 pages, classifying by bureaus and departments the thousands of publications that I recommended for condemnation. It was a gratifying exhibition of devotion on the part of my subordinates, who fully realized what it meant to me personally to "make good." Is it a wonder that on every proper occasion I bespeak your kind consideration for them? It is due to their loyalty that I have been able during the past year to accomplish the results that I have heretofore set forth.

Respectfully submitted.

AUGUST DONATH,
Superintendent of Documents.
